South West Hygiene Case Study

Airsteril Air Purifier

Customer

The Gylly Beach Cafe is open throughout the year and is the ideal place to enjoy everything from a relaxing coffee with a homemade cake to a tasty lunchtime treat or evening meal using the finest local Cornish ingredients with a culinary twist. It attracts new and regular customers all year round.

Challenge

We were asked to create an aesthetically pleasing washroom environment for their customers as the washrooms have no natural light or ventilation so often became odorous.

Solution

We provided an initial trial of the Airsteril units in the main washroom foyer and the nappy change area for one month. In these enclosed spaces the units completely removed all unpleasant odours and also helped to eliminate harmful bacteria and viruses found in the air or on exposed surfaces - 24 hours a day 365 days a year.

Result

The odours present in the unventilated washrooms before the Airsteril units were installed have been eliminated offering users a much more pleasant experience and the perception of how the business is run has been heightened.

Quote

General Manager – “With the help from all the team at South West Hygiene there has been a noticeable difference in the service and quality of our customer toilets. South West Hygiene really offers a personal service and has an eye for detail that is unmatched in the South West.”
